5,050 mm

INNOVATIVE SWEEPING TECHNOLOGY
MADE IN GERMANY

Ready for the future with innovative strategies: BROCK relies on a green drive and eliminates the superstructure engine for the “NEW GENERATION”.

The VS6 NG is equipped with a digital control panel to make it as comfortable as possible for the driver. The elimination of the superstructure engine results in less vibration, and the generally quieter driving style also contributes to a reduction in stress and wear.

HYBRID / VS6H

BROCK sweeping machines with hybrid drive not only consume less fuel, but also contribute to the protection of the environment. Compared to conventional vehicles with diesel engines, the CO² emissions of a hybrid vehicle are significantly lower. The chassis is driven by the engine, the sweeper unit by an electric drive.

HYDROSTAT

The hydrostatic drive ensures versatility and is a real powerhouse. Without a superstructure engine, the sweeper is ideal for those who need real power. The power generated is ideal for additional equipment, such as two-sided and simultaneous sweeping. If you do not want to compromise on performance, the VS6 NG Hydrostat is the right choice.

PTO / CAMSHAFT DRIVE

The sweeper unit is driven by the chassis motor, which reduces weight and wear and saves fuel. The perfect solution for municipalities, low-maintenance and fuel-saving but still the same suction power.

Which version is the right one? We gladly consult you!

FULLY ELECTRIC

Of course also available fully-electric as VS6e!
